                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC This invention relates to the DNA and protein sequences of novel isolated CC polynucleotides 80090, 52874, 52880, 63497, or 33425 encoding novel CC fucosyl transferase, seven transmembrane receptor, or Rho GTPase-CC activating protein (RhoGAP) family members. The DNA and protein sequences of the invention are useful for identifying a compound capable of CC treating a disorder by aberrant expression of the nucleic acid or the CC diagnosis. The invention also comprises a method for traeating a disorder cusing a modulator of the proteins activity. This method is useful for CC treating breast, ovarian, prostate, colon, or lung cancer, heart, CC cardiovascular (including endothelial cell), haematopoieteic, blood coversel and brain disorders. It is also useful in treating pain and CC protein sequences are also useful in treating point and CC protein sequences are also useful in treating proliferative disorders (e.g. acute leukaemia), cardiovascular disorders (e.g. cardiac CC hypertrophy, myocardial infarction, rheumatic fever), endothelial cell disorders (e.g. psoriasis, Grave's disease, rheumatoid arthritis), CC haematopoietic disorders (e.g. Alzheimer disorders (e.g. Kaposi sarcoma), CC degenerative disorders (e.g. Alzheimer disease), and hormonal disorders. The present sequences to identify other family members or related sequences. The present sequence crepresents the cDNA sequence encoding the human 80090 protein of the

                                                                                                                                                                                                                                                                                                                                                                                                   diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's genome that affect the activity of GENSET or by supplementing the patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET polypeptide expression and activity. The present sequence is a GENSET nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Full length GENSET human nucleic acids encoding potentially secreted proteins, useful in gene therapy and vaccination against a variety of diseases, and for diagnosis of those diseases.
                                                                                                                                                                                                                                                                                                                                  Sequence 1942 BP; 545 A; 460 C; 462 G; 475 T; 0 U; 0 Other;
